Leaning Out of Windows: a research creation project, explores how knowledge might be translated across the disciplinary communities of art and physics in order to develop a shared understanding of the cosmos. The project assesses methodologies of collaboration to develop ways to engage with the diverse languages employed by artists and physicists, namely between Emily Carr University and TRIUMF, Canada’s particle accelerator centre. What is shared is a space of mutual inspiration informing each other’s work in the search for new and emergent understanding of scientific phenomena.

Leaning Out of Windows Emergence is the second of two exhibitions of the research.
